

# Liberia Info API

## Objective:

Build a RESTful API with **3 main resources**:

1. **Counties of Liberia (The fifteen counties of liberia)**
2. **Soups of Liberia (Not less than 10 different soups)**
3. **Tribes of Liberia (The sixteen tribes of liberia)**

Each resource should support full **CRUD** (Create, Read, Update, Delete) operations.

## Requirements

### 1. Setup Express Server

In `server.js`:

- Setup Express
- Mount each router at:
  - `/api/counties`
  - `/api/soups`
  - `/api/tribes`

## 2. Create a Separate Router for Each Resource

In each file (e.g., `routes/counties.js`), implement:

Method	Route	Description
GET	<code>/</code>	List all items
GET	<code>/:id</code>	Get one item by ID
POST	<code>/</code>	Add a new item
PUT	<code>/:id</code>	Update an existing item
DELETE	<code>/:id</code>	Delete an item

Use simple arrays or read/write from JSON files in the `data/` folder for data persistence.

Note: you are require to use postman to test out your end points
